Climate Change Threatens To Wipe Indonesian Islands Off Map Many of Indonesia's islands may be swallowed up by the sea if world leaders fail to find a way to halt rising sea levels at this week's climate change conference on the resort island of Bali. Doomsters take this dire warning by Indonesian scientists a step further and predict that by 2035, the Indonesian capital's airport will be flooded by sea water and rendered useless; and by 2080, the tide will be lapping at the steps of Jakarta's imposing Dutch-era Presidential palace which sits 10 km inland (about 6 miles). http://news.yahoo.com/s/nm/climate_indonesia_islands_dc;_ylt=At0kz1L8... Don't expect republicans to provide you with any actual science. It's non-stop deny-and-run on global warming, non-stop liberal-bashing, and gushing admiration for corporatist hacks like Glen Beck. It's all just another U.N. communist plot according to Limbaugh's line of reasoning, and liberals are fools who believe anything Hollywood says. Logic, reasoning, empirical evidence, none of these things intrude into the poor illiterate trailer park world. Puggy loves his fast food, and cannot have his enjoyment disturbed by facts regarding how that Wopper with cheese is contributing to environmental degradation, global warming, denial of worker's basic rights, ad nauseum. It's all just a huge U.N. communist liberal conspiracy to impede his God-given right to stuff himself with artery-clogging fast food and sneer at the immigrant workers who serve it while they work for \$6.50 an hour and no healthcare benefits while the CEO of Burger Death, Inc. is rewarded with a multi-billion dollar severance package after losing the company millions in profits due to his incompetence. But it's all good to Bushies and their simpleminded view of reality. God forbid Bush actually does anything to try and correct real problems. This spin has convinced most Fox viewers that Global Warming will only happen in the year 7000 A.D. when we can be raptured. We'll all be raptured by the rightwing Fundy leader's nuck-a-ler war before the Earth is hurtled into the sun. Let's appoint Pat Robber-son to the WH and git 'er done ! Blow me up, goddammit! Yeeeeee-hawwwwwwwwwwwww.....

Yeeeeee-hawwwwwwwwwwwww..... Ask not what your country can do for Indonesia. Ask what you can do for Indonesia. What are you doing besides blaming Bush? Around the end of the first century predictions of the end of the world were common. There has not been a shortage since. There was the Club Of Rome prediction of the early '70s that by this time we would all be breathing sulfuric acid. There was the Love Canal catastrophe which led to the creations of still another federal agency. Now Global Warming and sea level rise.
